Finding the right setup for 12th scale you don't need many tools but sometimes there are certain tools that just make life easy. Now Unity Tool Inc. has a tweak board that really can make life easy. You can do tweak settings but it has camber, caster, and toe in blocks. These can be placed on the tweak board to set camber, caster and toe in/out on the car.

This the only tweak board that has these options for 12th scale. This tweak board can also be used in other cars like TC 10th scale.

This teak board can be ordered directly from Unity Tool Inc and instruction page .
