Jaco has released a new wheel for 12th scale that are larger in diameter than the standard wheels. They all come with single stage foams in the following shore rating:

Fronts:

Black-40
Magenta-32
Dbl Pink-35
Lilac-38
Purple-40

Rears:

White-25
Yellow-30
Gray-35
Pink-30
Magenta-32

The foam with that have the same shore rating are different foam types but with the same shore rating. The wheel diameter are 37mm fronts and the rears are 38mm. Fronts retail for \$16 and rears are \$18. The rears are slightly offset to help accommodate the added width of brushless motors when car makers switch to wider pods. The rears are designed to give high forward bite (inside rim flex), yet have good corner speed (extremely rigid outside). The wheels were designed by Josh Cyrul.
