After driving years with a Corally, a short adventure with an Associated, a dream of creating my car was finally realised in 2005 with the Vantomme M1.1 (a concept car based on the SpeedMerchant Rev4).
The first try was merely a check whether the carbon fibre supplier could do the job...
He did a superb one, so my ambition was now a truly own design...

A few corrections were made to the very first design:

- 1) numerous chassis cut-outs
- 2) extreme small lower motor plate for easy access motor
- 3) a sharp X shape front design
- 4) a very short chassis with an extra bumper to attach
- 5) own designing using AutoCAD program to really fine-tune the chassisline

The 'VantommeM12' (2007/09) hit the circuit for the very first time last weekend, this during a 'MRCZ Challenge race' (qualified in 2nd, 3rd in race),
battling with CorallySP12M, Hotbodies Cyclone12, CRC T-fource and L4's. Further testing and exploration of the car its possibilities are sheduled!
